**Relative Concentration**

Results relate only to the items tested as received. Customer must follow sampling methods as outlined in SOP-A112 Sampling Requirements and Submission Procedures.
Measurement uncertainty is a fundamental aspect of these results. For detailed information regarding the measurement uncertainty associated with each parameter, please refer to https://www.gatewaylabs.us/measurementuncertainty. For a precise estimation of measurement uncertainty at the time of analysis, contact the laboratory.
Gateway Labs adheres to OMMA specifications, applying a 'simple decision rule' for PASS/FAIL determinations. Each individual test result is assessed against its specified limit; any test result that exceeds the threshold will be marked as FAIL for that parameter. A FAIL result for any parameter in an analysis will result in an overall FAIL status for that analysis. PASS/FAIL determinations are based solely on measured values relative to specification limits, without accounting for measurement uncertainty.
