LRMB — Field Ops Module

Luxury Rentals Miami Beach · Client Overview · April 2026

Prepared by MonteKristo AI

Operational speed and payroll efficiency — the system enforces the behavior.

01 — CLIENT OVERVIEW

COMPANY	BUSINESS
Luxury Rentals Miami Beach (LRMB)	**Luxury vacation rental management**
DEPARTMENT FOCUS	TEAM SIZE
Property Management / Guest Relations	**~15 field staff · ~4 admins**

Field staff perform inspections, maintenance follow-ups, housekeeping coordination, and guest issue handling. Operations are currently inefficient and payroll-heavy due to manual workflows and poor field system usability.

02 — CURRENT SYSTEM STACK

Primary PMS / CRM: TravelNet Solutions — Reservations · CRM · Channel management · Accounting · Owner statements · Work orders

Akia	*Guest messaging + contract sending*
PriceLabs	*Dynamic pricing automation*
KeyData	*Market analytics + pricing insights*
Excel / Spreadsheets	*Used heavily for task coordination and tracking*

03 — CORE OPERATIONAL PROBLEM

Current Workflow Problems

- Work orders require manual coordination
- Tasks tracked in Excel
- Field staff can't upload photos from mobile
- Updates entered after returning to office
- Multiple admins chase status updates

- Task closure is inconsistent and slow

Operational Results

- High admin workload
- Slow turnaround times
- Duplicate data entry
- Lack of operational visibility

04 — THE WEDGE MODULE

MODULE NAME

Field Ops Warp-Speed Module

APPROACH

Sits on top of TravelNet — does not replace it

Create a mobile-first task workflow layer that standardizes task intake, assignment, progress updates, and proof-of-completion. Field staff operate entirely from their phones — no office return required to log work.

05 — MINIMUM VIABLE WORKFLOW

TASK INTAKE

Sources: guest issue · inspection result · maintenance request · housekeeping issue · manager-created task

Captures: property · unit · task type · description · priority · assigned staff

TASK STATUS FLOW

New → Assigned → In Progress → Blocked → Completed

Optional: Verified / Closed

MOBILE FIELD UPDATES

Open task from phone · upload photo · add note · mark status change

No laptop required.

DEFINITION OF DONE

Task cannot close unless: photo uploaded (when required) · timestamp recorded · notes entered

NOTIFICATIONS

Auto-triggered on: task assigned · task overdue · task blocked · task completed

Goes to supervisor and admin — no spam.

MANAGER VISIBILITY

Open tasks · overdue tasks · tasks by property · tasks by staff member · average completion time

06 — PILOT DEPLOYMENT SCOPE

PROPERTIES	FIELD STAFF
10–20	3–5
ADMIN	**DURATION**
1	2–3 weeks

07 — KPIS WE WANT TO MEASURE

METRIC	BASELINE	TARGET
Work order cycle time (open → closed)	Current	**↓ 30–50%**
Admin touches per task	Current	**↓ 40–60%**
Field-to-office re-entry	Current	**Near zero**
Tasks closed with photo proof	—	**90%+**
Repeat task rate	Current	**↓ 20–40%**

08 — TECHNICAL PREFERENCE

Workflow / Database	*Airtable or similar*
Mobile Form Layer	*Jotform / Typeform / GHL forms*
Automation	*n8n / Make / GHL workflows*
Notifications	*Slack / SMS / Email*

09 — DELIVERABLES FOR SATURDAY

- Workflow architecture diagram
- Recommended tool stack
- Implementation timeline
- Internal cost estimate
- Client pricing recommendation
- Pilot rollout plan

10 — MODULE BREAKDOWN

1. Maintenance / Work Order Management

Most operational leverage · Difficulty: Medium

Covers: broken appliances · AC issues · guest complaints · damage reports · vendor coordination · repair follow-ups

Task Intake Layer — Manager/admin submits issue; property + unit auto-tagged; priority assigned
Auto Assignment — Routed to correct technician/vendor with escalation rules if not accepted
Mobile Field Interface — View task · upload photos · add notes · change status · mark complete
Status Flow — New → Assigned → In Progress → Waiting Parts → Completed → Verified
Definition of Done — Photo uploaded · note entered · timestamp recorded
Manager Dashboard — Open work orders · overdue · technician workload · avg completion time + visual comparison vs previous period

KPI Impact: Cycle time ↓ **30–50%** · Admin touches ↓ **40–60%** · Reopen rate ↓ **20–30%**

2. Housekeeping Coordination

Easiest implementation · Difficulty: Low

Covers: cleaning schedules · turnover tasks · readiness confirmation

Auto Task Creation — Reservation ends → cleaning task auto-created with unit number, checklist, scheduled time
Mobile Cleaner Interface — Task on phone; check off items · upload final photo · mark unit ready
Status Flow — Scheduled → Cleaning → Ready → Verified
Admin Dashboard — Units ready · units pending · units delayed
Replaces: WhatsApp updates · phone calls · manual scheduling

KPI Impact: Turnover speed ↑ **20–30%** · Cleaner coordination time ↓ **50%** · Admin scheduling ↓ **massively**

3. Inspection Reporting

Best data foundation · Difficulty: Low–Medium

Covers: property inspections · damage documentation · compliance checks · guest readiness verification

Mobile Inspection Forms — Inspector opens checklist on phone (kitchen · bathrooms · appliances · furniture condition)
Required Evidence — Photos · notes · issue tags
Auto Issue Creation — Inspector flags problem → maintenance ticket auto-generated
Inspection Dashboard — Inspections completed · issues flagged · recurring property problems
Removes: inspection paperwork · missing documentation · reactive repairs

KPI Impact: Damage detection ↑ **early** · Guest complaints ↓ · Maintenance predictability ↑

STRATEGIC COMPARISON

MODULE	IMPACT	COMPLEXITY	SPEED TO VALUE
Maintenance Work Orders	Highest payroll impact	Medium	Medium
Housekeeping	Fastest improvement	Low	Fast
Inspections	Best data foundation	Low–Medium	Medium

POSITIONING REMINDER

WHAT WE SELL	Operational speed and payroll efficiency — not AI tools
THE SYSTEM	Enforces behavior · standardizes work · eliminates manual coordination
WEDGE ENTRY	Mobile-first task layer on top of TravelNet — three modules, measurable ROI from day one

The system enforces the behavior. Speed and efficiency follow.
